Index to Volume 65

The Journal of Heredity, 1974

Aberrant mitoses in spleen cells of W/W^v anemic mice, Henry R. Hirsch and Howard J. Curtis, 245.

Aberrant regulation of the agouti pigment pattern in the viable yellow mouse, Donald B. Galbraith and George L. Wolff, 137.

Adalsteinsson, Stefan, Inheritance of the palomino color in Icelandic horses, 15.

Adamson, W. C., *et al.*, Inheritance of resistance to *Meloidogyne hapla* in *Lespedeza cuneata*, 365.

Aimar, C. and Cl. L. Gallien, Progeny of isogenic males and females obtained by nuclear graft in *Pleurodeles*, 78.

Allison, J. E., *et al.*: Ocular sites of gene expression in the Norway rat, 273; Coat-color restriction gene in rats: Its effect in the homozygous condition, 291.

Alloxan induced aneuploidy in mice, C. D. Tollinger, C. L. Chrisman, and D. P. Doolittle, 345.

Alternate-flowering apple tree, Lawrence G. Burk, 244.

Amato, C., *et al.*, Presence of *wa-1* in DW/Dt and related strains of mice, 323.

Animal Genetics

Bee: esterase polymorphisms at two loci in *Melipona* species, 349.

Cats: gene frequencies in Greek cats, 227.

Cattle: dicentric Robertsonian translocation in a Dexter cow, 353; dermatosparaxis, a genetic defect of connective tissues in the calf, 356.

Drosophila: variation in ADH activity of class I and class II strains of *D. melanogaster*, 141; distribution of heterochromatin in type-III Y and other chromosomes of *D. athabasca*, 238; temperature related genetic divergence in body size, 257.

Ephestia kühniella: melanism studies, 213.

Fish: mutant affecting chromatophore proliferation in a poeciliid, 326.

Fowl: wheaten plumage in ring-neck pheasants, 104; pirouette mutant in chickens, 124; trypsin-banding procedure for avian chromosome study, 188; cytogenetic and immunologic studies in chickens with autoimmune thyroiditis, 219; testes structure in normal and parthenogenetic turkeys, 287.

Frog: expression of histocompatability loci in *Rana pipiens*, 341.

Hamster: long-hair growth influenced by sex, 58.

Heliothis zea: est-II phenotypes, 243.

Horse: Icelandic palomino color, 15.

Mice: single-locus control of saccharin preference, 33; cytological analysis of seven dominant genes affecting neural tube, 58; rachiterata—skeletal mutation on chromosome 2, 91; heritability of osteometric traits in randombred population, 109; test for heterosis in topcross progeny of replicate selected lines, 121; greying with age, 126; aberrant regulation of agouti pigment pattern in viable yellow mouse, 137; new allele for sparse fur gene, 194; testicular function in strains with different age of sexual maturation, 204; aberrant mitoses in spleen cells of W/W^v, 245; genetics of cancer, 262; liver and erythrocyte catalase controlled by independent loci, 277; chromosome 19, 297; *T*-alleles probably not inversions, 308; *wa-1* in DW/Dt and related strains, 323; alloxan-induced aneuploidy, 345; mocha, a coat color and behavior mutation on chromosome 10, 362; sex-dependent and *H-2*-linked influence on expressivity of brachyury gene, 369; comparison of exocrine pancreatic insufficiency mutation and Coxsackievirus B infection, 378; melanocyte populations in yellow and black hair bulbs, 381.

Monkey: a third species of the owl monkey, 321.

Mosquito: sex-ratio distortion and directed alternate segregation of interchange complexes, 71; temperature sensitive eye-color mutant in *Culex tritaeniorhynchus*, 359.

Pleurodeles: progeny of isogeneic males and females obtained by nuclear graft, 78.

Rats: somatic chromosomes of African white-tail, 223; genetics of heart aromatic esterase and plasma alkaline phosphatase in *R. norvegicus* substrains, 235; ocular sites of gene expression, 273; coat-color restriction gene—its effect in homozygous condition, 291; new mutant in yellow-bellied cotton, 316; genetic study of osteopetrosis, 373.

Sheep: inheritance of tail length in crossbred Finnsheep, 331.

Tribolium castaneum: comparison of three selection programs, 8.

Vole: white spotting, polydipsia, muscular dystrophy, and karyotype, 301.

Antonovics, J. and M. C. Grant, Experimental evidence on the frequency of neutral mutations, 241.

Arceci, Robert J. and Donald B. Galbraith, Melanocyte populations of yellow and black hair bulbs in the mouse, 381.

Arnold, R. C., *et al.*, Cytological investigations on onion root-tip cells treated with some cigarette smoke constituents, 311.

Asher, J. H., Jr., *et al.*, A new mutant in the yellow-bellied cotton rat, 316.

Ayala, Francisco J. and Michael E. Gilpin, Lack of evidence for the neutral hypothesis of protein polymorphism; A rejoinder, 377.

Baker, Richard H. and Richard K. Sakai, A temperature sensitive eye-color mutant in a mosquito, 359.

Baker, R. L., *et al.*, Computer-assisted instruction in teaching basic animal genetics, 61.

Baramki, T. A., *et al.*, Prenatal cytogenetic analysis of women with high risk for genetic disorders, 209.

Barrow, J. R. and M. P. Dunford, Somatic crossing over as a cause of chromosome multivalents in cotton, 3.

Bartke, A., *et al.*, Testicular function in mouse strains with different age of sexual maturation, 204.

Behera, B., *et al.*, Histological analysis of colchicine-induced deformities and cytochimeras in *Amaranthus caudatus* and *A. dubius*, 179.

Bhalla, R. C., *et al.*, Cytological investigations on onion

root-tip cells treated with some cigarette smoke constituents, 311.
Biological fixing, (Rev.), Sheldon C. Reed, 63.
Bloom, Stephen E. and Bruce R. Korf, Cytogenetic and immunologic studies in chickens with autoimmune thyroiditis, 219.

Plant Genetics

Amaranthus: histological analysis of colchicine-induced deformities and cytochimeras in *A. caudatus* and *A. dubius*, 179.
Apple: alternate-flowering tree, 244.
Bean: new genes for seed-coat color in American and Iranian blotch varieties, 319.
Citrus: isoenzyme identification of zygotic and nucellar seedlings, 81; inheritance of browning of young-shoot extracts, 97.
Claytonia virginica: chromosome abnormalities stimulated by excess sucrose, 193.
Cotton: somatic crossing over as cause of chromosome multivalents, 3.
Kohleria: inheritance of cytoplasmic male sterility, 232.
Lespedeza cuneata: inheritance of resistance to *Meloidogyne hapla*, 365.
Lupine: genetic control of ADH isozymes in *Lupinus angustifolius*, 198.
Maize: subcellular localization of catalase variants coded by two genetic loci during development, 28; E_9-E_{10} esterase loci, 37; heritability of prolificacy, 163; another small rachis character, 195.
Millet: radiation-induced female sterility, 247.
Muskmelon: inheritance of halo cotyledon mutant, 315.
Nicotiana: chromosome banding without denaturation and renaturation in *N. otophora*, 101; 251.
Onion: cytological effects of some cigarette smoke constituents on root-tip cells, 311.
Peanuts: inheritance of pod constriction, 94; growth habit in infraspecific-cross population, 160.
Petunia hybrida: chromatographic study of phenolics of species ancestral to *P. hybrida*, 85.
Pine: inheritance of cone color in *Pinus monticola*, 60; white-pollen varient of bristle cone, 123.
Pisum sativum: genes useful for teaching some classical genetic principles, 253.
Potato: origin and formation of unreduced gametes, 175.
Rice: resistance to grassy stunt virus, 135.
Soybeans: a desynaptic mutant, 280; inheritance of spider mite damage, 379.

Tomato: flower number and branching, 43; intercalary inflorescence, 128; doage-dependent epistasis bearing on trisomy abnormalities and evolution, 130; resistance to root-knot nematode—wilt-fungus complex, 153; linkage relations in indehiscens mutant, 313.
Secale cereale: effects of glyphosate and ethephon on meiotic chromosomes, 250.
Tradescantia: prediction of flower color genotype by somatic cell analyses, 21.
Tripsacum: chromosomes Tr7 and Tr13 partial homeologs to maize chromosome 4. 335.

Prediction of flower color genotype in *Tradescantia* by somatic cell analyses, R. P. Mericle, M. L. Christianson, and L. W. Mericle, 21.
